## Experience

### Remote Monitoring & Management Engineer – Kaseya Ltd. July 2024 – May 2025, Orlando, FL

- Remotely managed and provided technical support for thousands of businesses & critical city infrastructure, such as law enforcement & emergency services
- Automated solutions resulting in increased efficiency & decreased down time during incidents
- Implemented patch & resource management guidelines and routines
- Managed the Endpoint Detection & Response platform resulting in an increased security posture

### Independent Contractor – Uber Technologies, Inc. June 2020 – July 2024, Melbourne, FL

- Completed 2,063 trips and deliveries, including 1,353 rides and 710 deliveries
- Earned a 100% delivery satisfaction rate and maintained a 4.96-star rating across the last 500 rides

### PC Repair Technician – MicroApp PC Repair. January 2015 – December 2017, Melbourne, FL

- Performed diagnostics and repairs on an average of 300 service operations annually
- Clarified diagnostic findings to hundreds of customers and outlined service options
- Attained a 98% customer satisfaction rating through effective communication & repairs
- Gained knowledge of standard equipment, including manufacturer repair guidelines

## Education

### Network Systems Technology

Eastern Florida State College • Melbourne, FL  
Engaged in foundational studies related to network systems.

### Cyber Security Analyst training

MyITFuture • Orlando, FL

## Skills

|                                                                  |                                                                                         |
|------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| Managing cybersecurity risks                                     | • Implementing automation through software or scripts (Powershell / Python)             |
| Installing network components and security measures              | • Conducting thorough network assessments and system tests (Greenbone / Tenable Nessus) |
| Responding to incidents promptly and effectively                 | • Collaborating with AI (Artificial Intelligence) Agents & Agentic systems.             |
| Administering endpoint security solutions                        | • Experience with RMM, EDR & MDR platforms (Datto RMM, Datto EDR, RocketCyber MDR)      |
| Utilizing Security Information and Event Management (SIEM)       | • Ensuring compliance with industry standards: NIST, ISO 27001, HIPAA, PCI DSS & FIPS.  |
| Log review & analysis for advanced troubleshooting               |                                                                                         |
| Applying cryptographic techniques to safeguard data              |                                                                                         |
| Utilizing virtualization technologies (VMware)                   |                                                                                         |
| Leveraging threat intelligence for preemptive defense strategies |                                                                                         |
